## “Natural Gas, Power, and Carbon Management”

Douglas Allen & Beau Griffey, US Energy Services

Tuesday, January 12th

The Twin Cities Chapter of the American Foundry Society will host a dinner and meeting on Tuesday, January 12th at the Green Mill in Shoreview, MN. The featured speakers, Doug Allen and Beau Griffey, from US Energy Services, will give a presentation on “Natural Gas, Power, and Carbon Management.”

**Doug Allen...**Doug joined U.S. Energy Services in December 2006. As an Account Manager, he manages a cross section of accounts including manufacturing and ethanol facilities, as well as gas distribution companies. Doug also pursues new business and clients for U.S. Energy Services and assists existing clients with plant site development.

Prior to joining U.S. Energy Services, Doug spent over eight years as the Natural Gas Supply Manager for Cargill, Inc. He was responsible for purchasing physical supply, managing basis risk, ensuring proper supply nominations and coordinating new site development. Earlier in his career, Doug worked as an Energy Marketer for Enron Energy Services and as a Gas Scheduler for Energy Masters Inc. Doug has extensive experience working with end users in the ethanol, food production, manufacturing, fertilizer, steel and other sectors.

**Beau Griffey...**Since joining U.S. Energy Services in 2007, Beau Griffey has worked with clients to minimize energy costs while maximizing the energy value for the facilities they operate. As a leading force behind *Blue CO<sup>2</sup>* — U.S. Energy Services' newest renewable energy offering — Beau is a strategic leader in project management with experience in business acquisition integration, new business unit development, carbon credit development and plant site development. He brings a progressive mindset to the ever-changing energy landscape and the renewable energy markets, and is a valuable expert resource in helping clients navigate complex environmental attribute markets (i.e. carbon credits).

Prior to joining U.S. Energy Services, Beau had extensive experience working as a district manager for Lincoln Industrial, a manufacturer of lubrication and Industrial pumping equipment. During this time, Beau developed a reputation as an insightful leader with a keen sense of business acumen by capitalizing on key opportunities through strategic planning and partnerships.

**Reservations** for the meeting can be made by calling the TC Chapter AFS office at 763-413-7933 or by emailing Joy at [jimclifford@msn.com](mailto:jimclifford@msn.com). The deadline is NOON on Friday, January 8th.

*“The American Foundry Society exists to provide and promote knowledge and services that strengthen the metal casting industry...”*
